# DBT Series

For high speed machining

## DBT Series

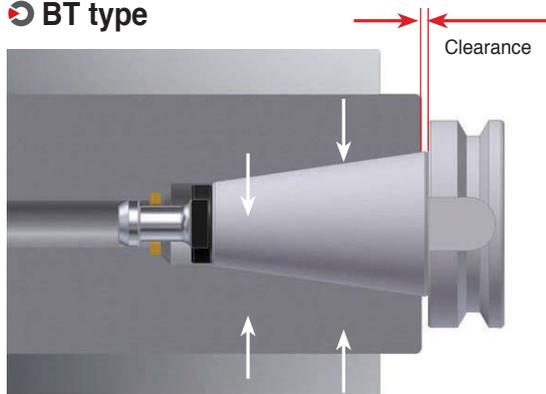

2 face constrained system of taper and shank face for excellent surface roughness and high quality finish in heavy cutting at high speed

### Features of 2 face constrained system

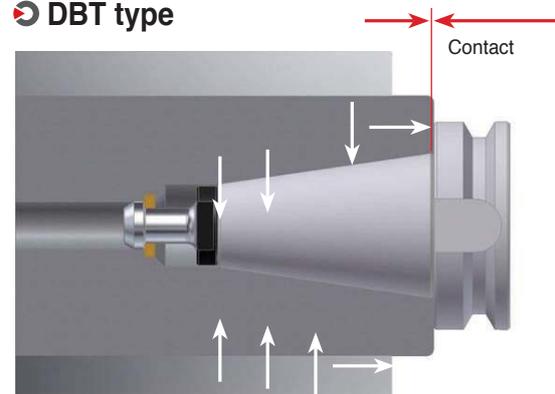

- Stable machining can be possible at high speed
- Improvement of tool-life for machine spindle and cutting tool
- Prevention for corrosion of taper portion of both machine spindle and tool holder by heavy duty machining vibration
- Guarantee for the most suitable machining and high accuracy

### BT type

The clearance between spindle and face of shank

### DBT type

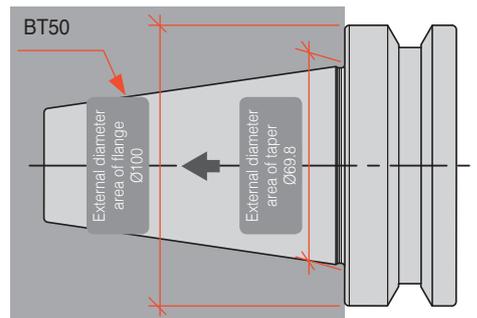

Perfect contact of both faces Better precision/less vibration

### Higher stability and precision

Stability and precision increase due to the close contact between taper face and wide external diameter of flange at DBT shank than at BT shank

Shank	Taper	Flange
BT30	Ø31.7	Ø46
BT40	Ø44.4	Ø63
BT50	Ø69.8	Ø100

Difference between taper face contact and flange contact at its external diameter

### Various models

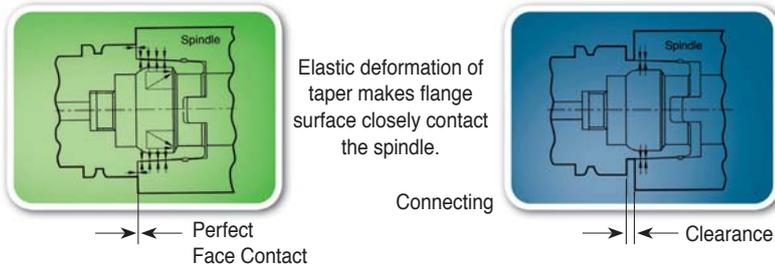

Tapping	Milling	Face milling	Angular head
 BT-DST	 BT-NPM	 BT-DHE	 BT-FMA
			 BT-KAG

# HSK Tooling System

## Features of HSK 2 face constrained toolholder

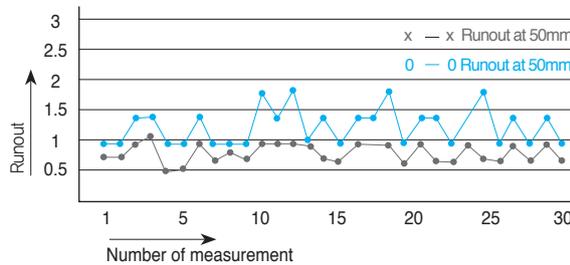

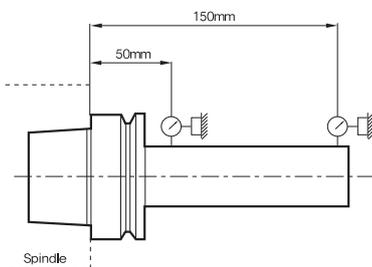

The 7/24 taper shank for multi-purpose has been pointed out that its performance is inappropriate in terms of repeatability, joint stiffness and high speed machining. Drawbacks of 7/24 taper shank had been eliminated by using new two face contact

HSK shank -Perfect 2-surface constrained system

## Excellent repeatability-run out accuracy

As taper of holder will deform elastically following the profile of the spindle shape, there is no eccentricity between the spindle and the other. Also, due to perfect face contact between flange surface of the holder and spindle face, bending strength of the holder is very high, which makes radial and axial and accuracy very high

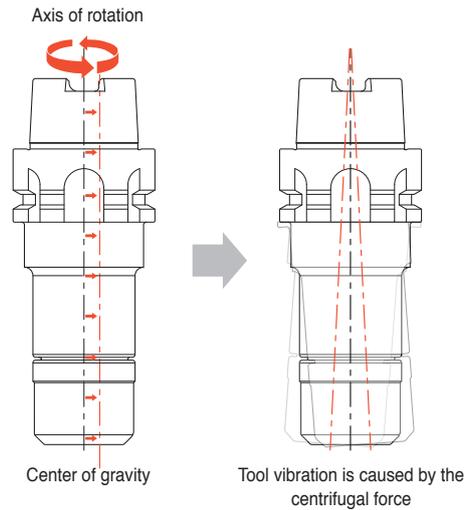

## High rigidity against bending load

HSK 63	BT 40

# Balancing System

## Imbalance

- **Cause of imbalance**  
Imbalance occurs due to the asymmetry of tool geometries and spindle run-out
- **Difficulties of imbalance**  
Shorter tool life, inferior surface roughness and noise are caused by vibration during rotation and damage on spindle bearing
- **Need for balancing**  
Balancing is needed to prevent unbalance for better surface roughness, precision and tool life

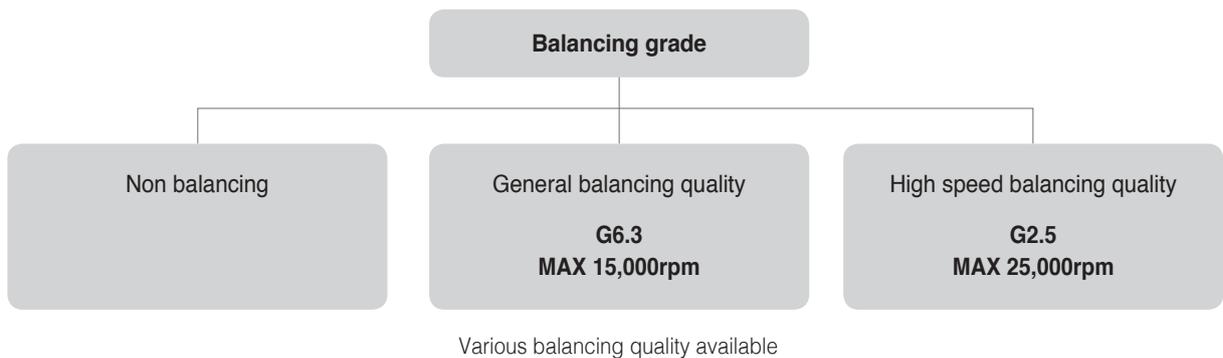

※ A case that the tool's center of gravity deviates from the rotation axis

## The most optimal accuracy at high speed

- Without bending from rotation of an unbalanced load, High accuracy and rigidity are maintained
- Excellent Balance ( $\leq G1.0$  or  $0.5 \text{ g}\cdot\text{mm}/\text{kg}$ )
- Tool life, surface finish, dimension of accuracy and productivity can be realized at high speed

## Balancing grade standard

# Technical Information for DHE

## Hydraulic expansion chuck

# DHE Series

- Ideal for mold making and machining automobile components & precise parts due to high precision machining
- Improved surface roughness due to vibration proof by hydraulic chamber
- Reduced replacement time and tiredness of worker with the use of T wrench for removal
- Applicable shank diameter: Ø3-32

### Code system

### Features

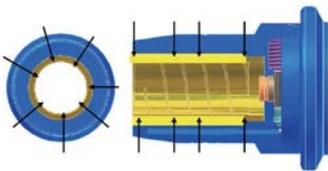

High accuracy provides long tool life due to reduced wear and hydraulic room enhances a surface roughness by lessening vibrations

- RUN OUT: under 5  $\mu\text{m}$
- L = 3 x ØD
- Shank: Tolerance of ØD: h6

### Internal sealing structure (Durability)

- Internal sealing system protects the chuck against dust, cutting oil, lubricant and chips getting into it
- Maintaining clamping force and accuracy for a long time

### With simple t-wrench, very easy to change a tool

- Clamping structure for easy operation (Convenience)
- Decrease of worker's fatigue
- Improving machine capacity

Shank	Grade	Max.rpm
BT50, SK50, HSK100A	G6.3	10,000
BT40, SK40, HSK63A		15,000
BT30, HSK50A, SK30		20,000
HSK40A	-	25,000

### Stable clamping

The clearance between holder and tool is fixed by hydraulic pressure

Adjust screw 	M520C		M820C						M1230C	

Champion milling chuck

# CPM

- Improved tool life by blocking dust and lubricant leaking with perfect sealing structure on O-ring and Nut
- Available through coolant system with CTC set
- Length regulator is inserted in CPM, user can adjust length conveniently

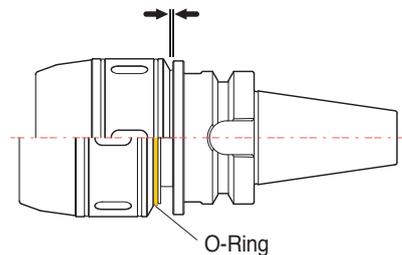

Code system

Prevention of grease leak and dust proof

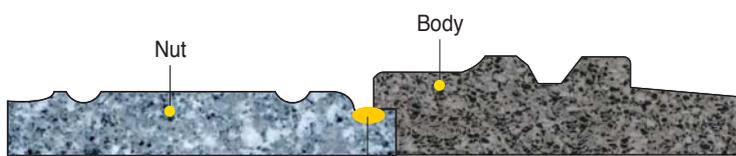

CPM has O-Ring on nuts to absorb cutting vibration for stable operation and prevents inflow of debris

Face contact for stable machining and dust proof

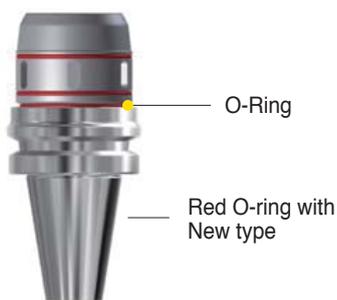

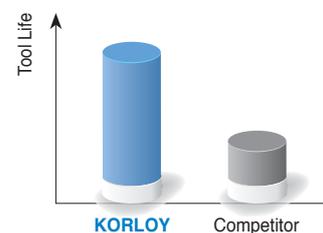

Correlation of oil leaking and tool life

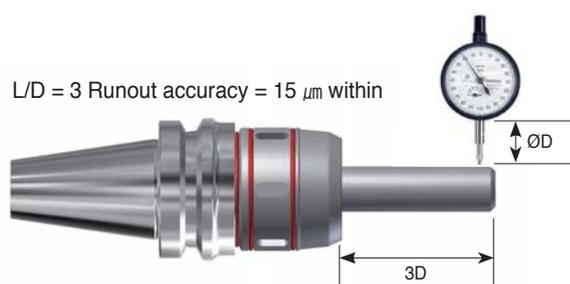

Obvious increase of tool life after applying dust proof system

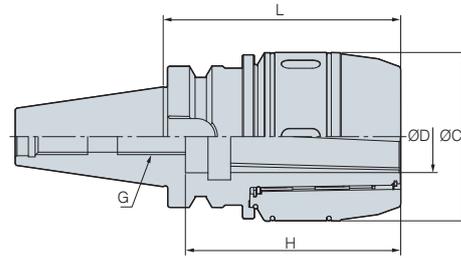

O-Ring: Blocking lubricant leakage and dust entry → Enhanced tool life

L/D = 3 Runout accuracy = 15 μm within

• Order-made sets available • Through coolant system is optional

New power milling chuck

# NPM

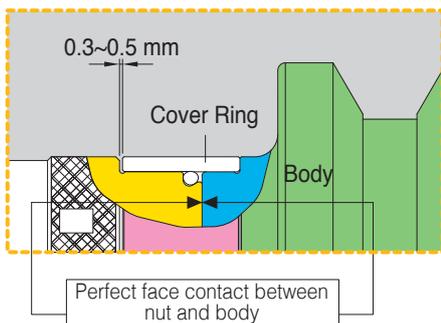

- Strong clamping over 500kgf·m (on NPM42 basis)
- DUST BLOCK functions for blocking foreign substance
- Jet coolant available
- High precision within 15 $\mu$ m at L/D = 3
- Applicable shank diameter: D6-42

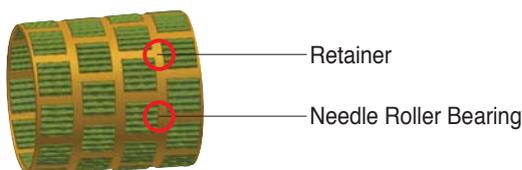

Code system

Improvement of durability by preventing minute dust, chips and coolant

- Adopted Stop Ring on Head parts
- Preventing minute dust by Shim&O-Ring

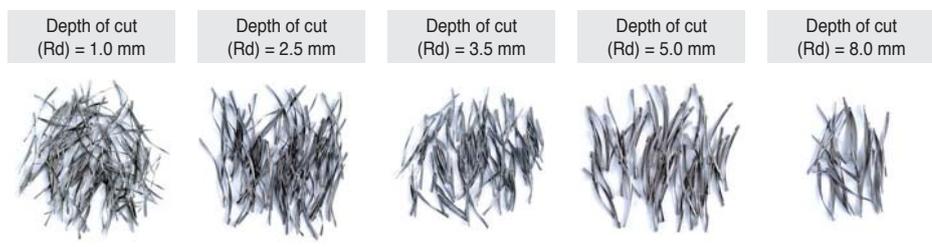

- Specially designed Steel Bearing for prevention of damage
- Strong Clamping by spreading the force

Stable machining from heavy to fine

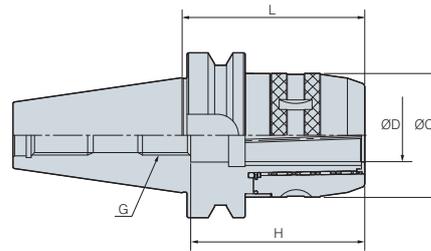

Perfect face contact and Powerful clamping force strengthen both Cutting force and Absorbtion of vibration.

Possible machining from heavy milling to fine finishing

Collet chuck

# SDC/P

- ER collet chuck, standard type for general machining
- Applicable shank diameter:  $\varnothing 1.0\sim 26.0$

➤ **First-class nut (SWISS Made )**

Easy clamping of collets

Special hardening treatment

For SDC/P  
(General machining)

High speed collet chuck

# DSK

- Available for machining at max. 15,000RPM and balancing of G6.3
- Minimized tool vibration during operation by using collet 8°
- Swiss made high precision nut enhances stability
- Applicable shank diameter:  $\varnothing 1.8\sim 25$

Standard type & Precision type	Designation	Arbor	Max chucking	Run-out
	HC6- $\varnothing d$	10.5	6.0	Standard type 5 $\mu m$
	HC10- $\varnothing d$	15.5	10.0	
	HC13- $\varnothing d$	20.1	13.0	
	HC16- $\varnothing d$	24.6	16.0	Precision type 3 $\mu m$
	HC20- $\varnothing d$	29.1	20.0	
	HC25- $\varnothing d$	35.6	25.0	

**8° HC collet**

Minimized tool vibration during operation

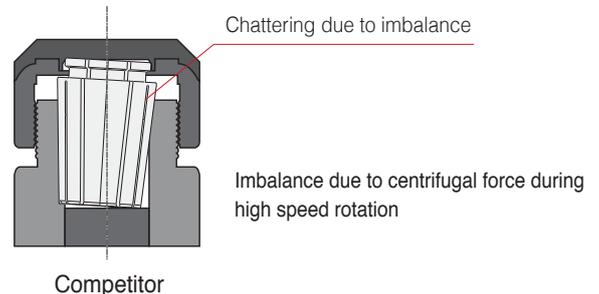

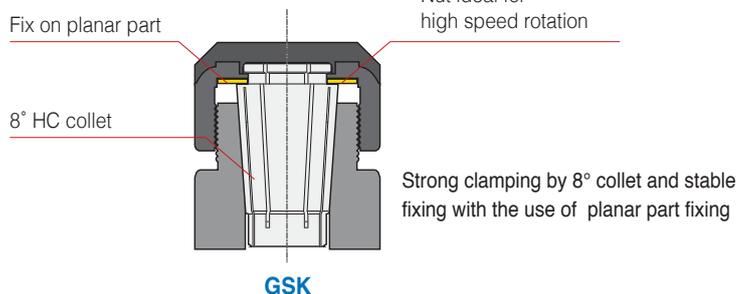

Great speed slim collet chuck

# GSK

- Available for machining at max. 25,000RPM and balancing of G6.3
- Increased productivity due to high speed machining
- Minimized tool vibration during operation by using collet 8°
- Swiss made high precision nut enhances stability by pressing collet uniformly
- Applicable shank diameter:  $\varnothing 1.8\sim 25$

➤ **Original design**

Slim type collet chuck

# DSK

- Balancing G6.3 available for machining at max. 15,000RPM
- Minimized tool vibration during operation by using collet 8°
- Swiss made high precision nut enhances stability
- Applicable shank diameter: Ø1.8~25

Code system

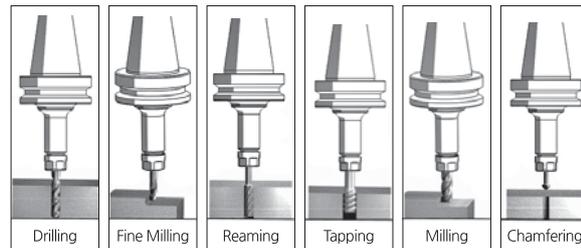

First-class nut (SWISS made )

Easy clamping of collet

Special hardening treatment

Multifunctional applications

# Technical Information for GERC

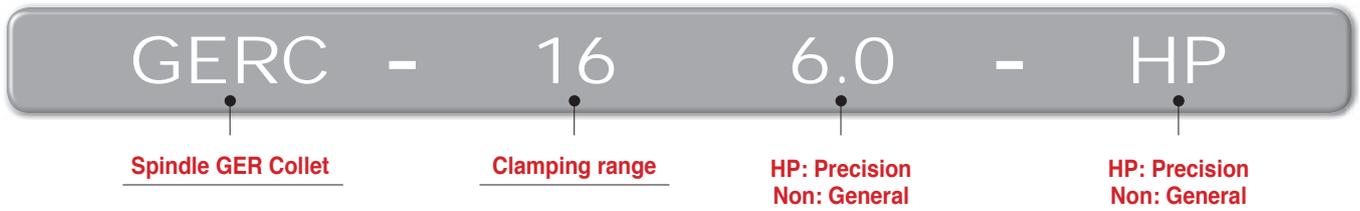

GER Collet\_GER

**GERC** *new*

- Corrosion resistant collet to micro unit
- High tech coating for long lasting precision
- Longer tool life and higher productivity

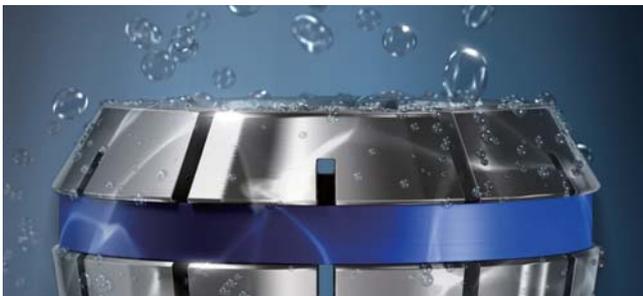

## Code system

## Special coating technology

Unlike GERC collets, Conventional non-coated collets have the following features:  
Non-coated collets are affected by corrosion due to high humidity, cutting fluid, cleaner, salt, gas and many other factors, which in result deteriorates whole quality of machining

When a collet gets rusty, the tool life is shortened and precision considerably decreases. To prevent this problem, surface treatment by micro unit was applied to GERC collets for effective protection and long lasting precision

GERC

Competitor

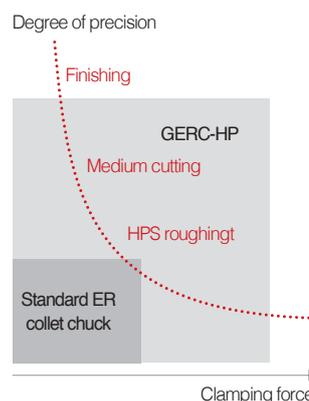

Two samples of collets after 4 months of use:  
Left: GERC collet, Right: Non-coated

## GERC-HP

A precision type collet chuck is expensive than standard one, but still it has more advantages in long term cost and efficiency. Using GERC-HP can minimize pricy reworking due to smaller tolerance with maximum precision

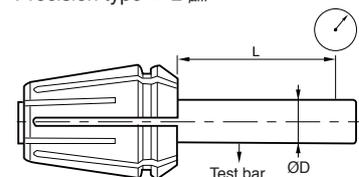

Precision type collet 2  $\mu$ m

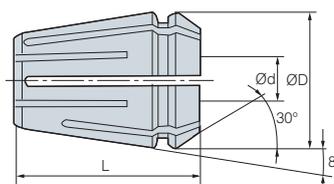

## Precision (L/D = 3)

Standard type = 5  $\mu$ m  
Precision type = 2  $\mu$ m

## GERC Collet

High speed synchro tapping chuck

DST **new**

- Tapping chuck for high speed machining
- Specially designed structure for absorbing thrust load and preventing damage on the tap
- Through coolant system available
- Applicable range: M1-M22

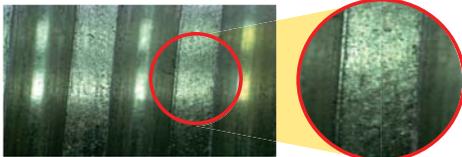

Code system

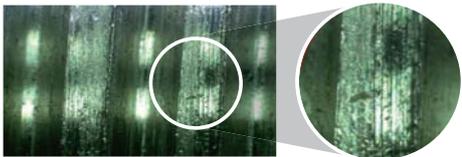

Excellent performance, precise machining

Expanded machining area

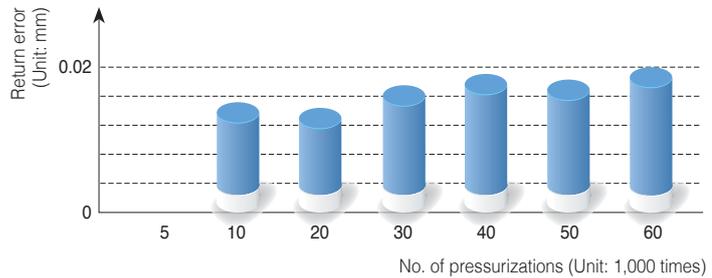

**DST22**  
(vc = 100 m/min)

Excellent cutting face

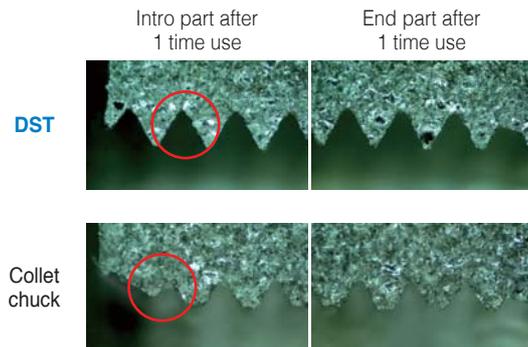

Conventional one

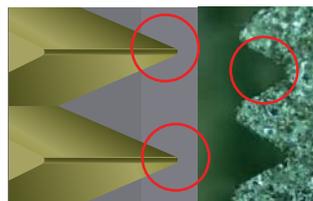

Exclusive collet for tapping

- At tapping work use of TER collet
- DST3: Use of ER11 collet

Comparison of thread figures

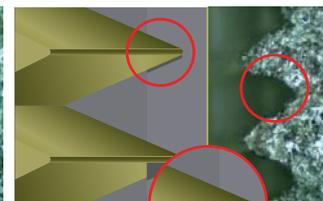

Synchro tap chuck(DST7)

The threads have a good figure, and didn't get out of its shape

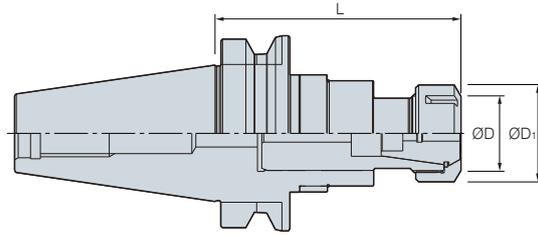

General collet chuck

The thread is out of its shape due to synchronization error

Available for various angles

## ANGULAR HEAD

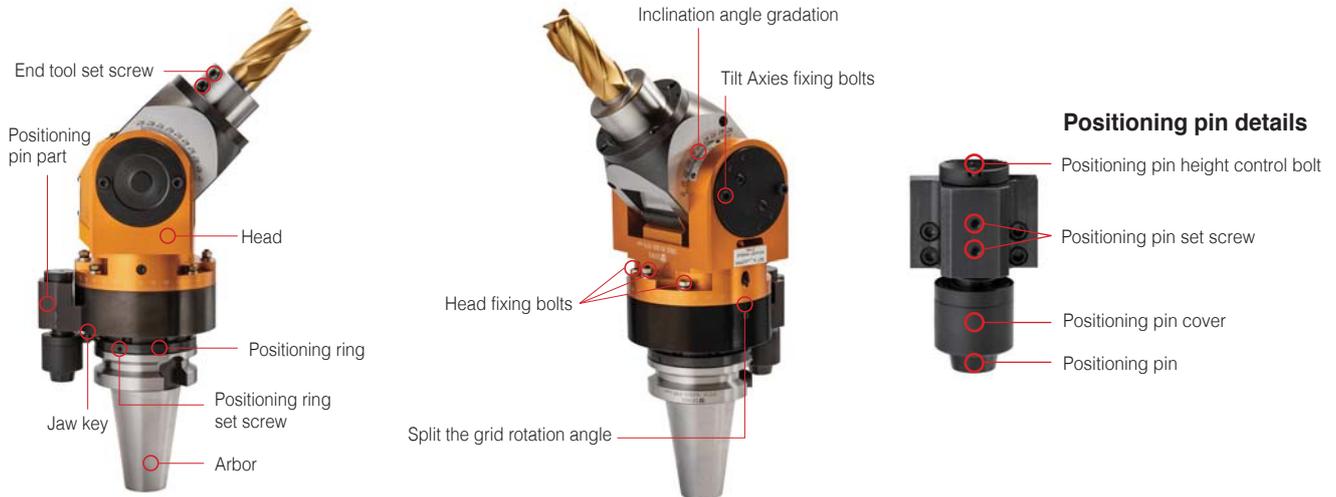

### Features

- Doubled effect by one equipment/Available for various angles
- Lighter aluminum body

### Code system

### Name of angular head parts

### Various applications

0~90-degree rotating (MAH, KHU)	Fixed 90-degree type (KAH)	Fixed 45-degree type (KAC)	Attachment type (HRAG, KAG)

### Components

# Technical Information for Angular Head

## MAH

### Universal type MAH (Reinforced series)

- Reinforced type Better performance by improving existing universal Angular head
  - Stability on large mold machining
  - Use 32mm Ball Endmill
  - Reinforced from KHU type

## HRAG

### Attachment type HRAG (Reinforced type)

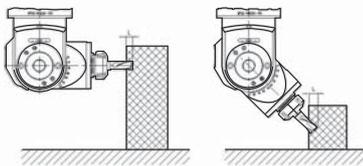

- HRAG: The reinforced bracket enhanced durability upto 200%
  - Stability on face milling machining
  - Reinforced stiffness from KAG type

## KHU

### Universal type KHU

- Free angle adjusting up to 90°
  - HSK and SK type are order made

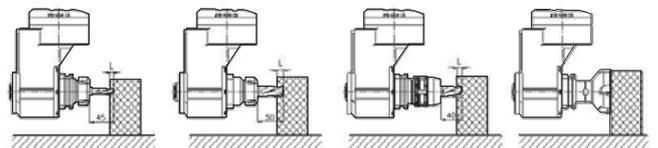

BT50-KHU20-195

## KAG

### Attachment type KAG

- Free 360° angle adjusting from side to side
  - Possible to use various tools of BT40 and BT30
  - HSK and SK type are order made

BT40-SDC20-60  
(Ø12 E/M)

NT40-SDC20-60  
(Ø20 E/M)

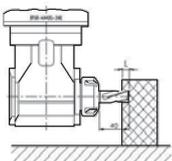

BT40-NPM20-85  
(Ø20 E/M)

BT40-FMA25.4-45  
(Ø80 Shoulder Mill)

## KAH

### Modular type KHU (90° type)

- Fixed 90° type angular head
  - In case of using a tap collet, please contact us in advance
  - HSK and SK type are order made

BT50-KAH20-200

## KAC

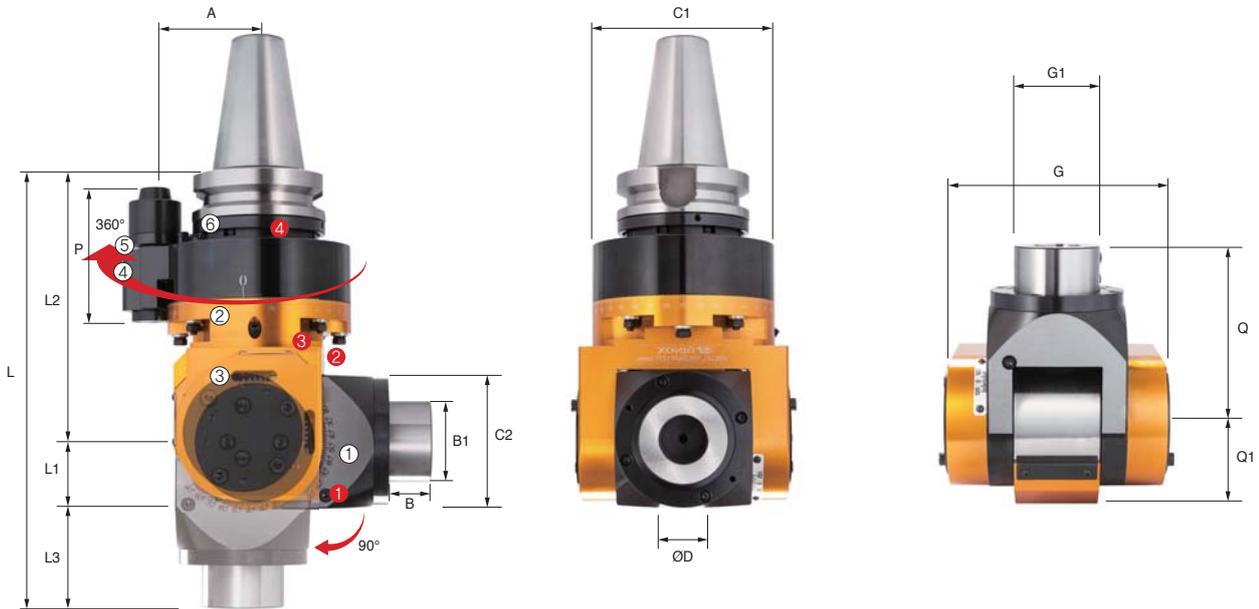

### Modular type KAC (45° type)

- Fixed 45° type angular head
  - HSK and SK type are order made

FBH back boring & balanced type

# FBH/B

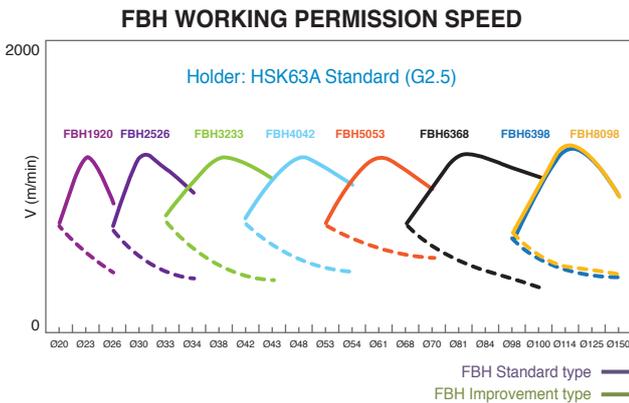

- High speed boring and back boring capability
- High precision balancing: G2.5, Head: G6.3
- Min. adjustment range: 2  $\mu\text{m}$

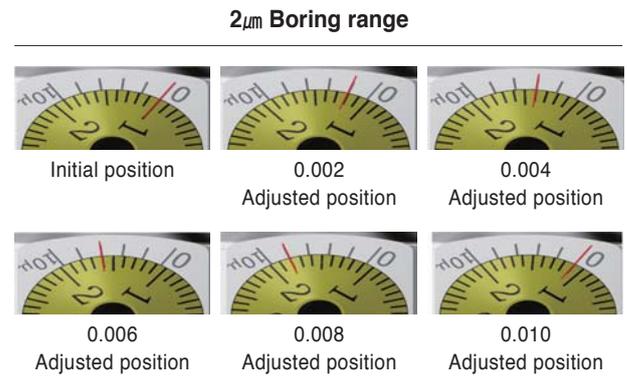

Code system

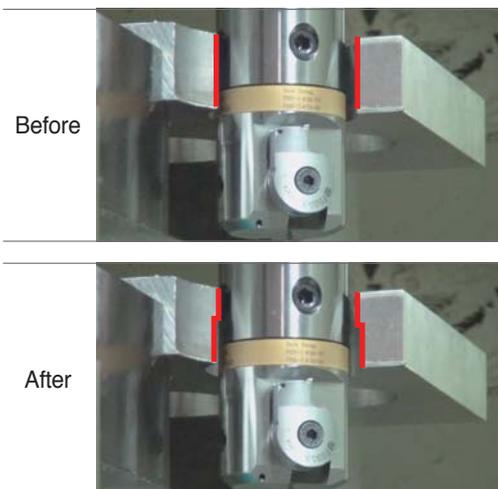

Working permission speed

Boring range adjustment method

Back boring

Adjusting machining direction available

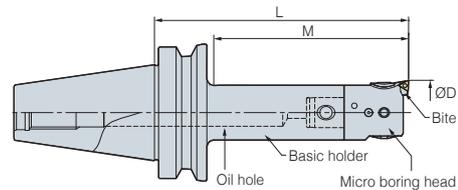

Easy change of machining direction only by adjusting the bite

# BT-FBH/B

Balance cut tool for Rough boring

# TBC

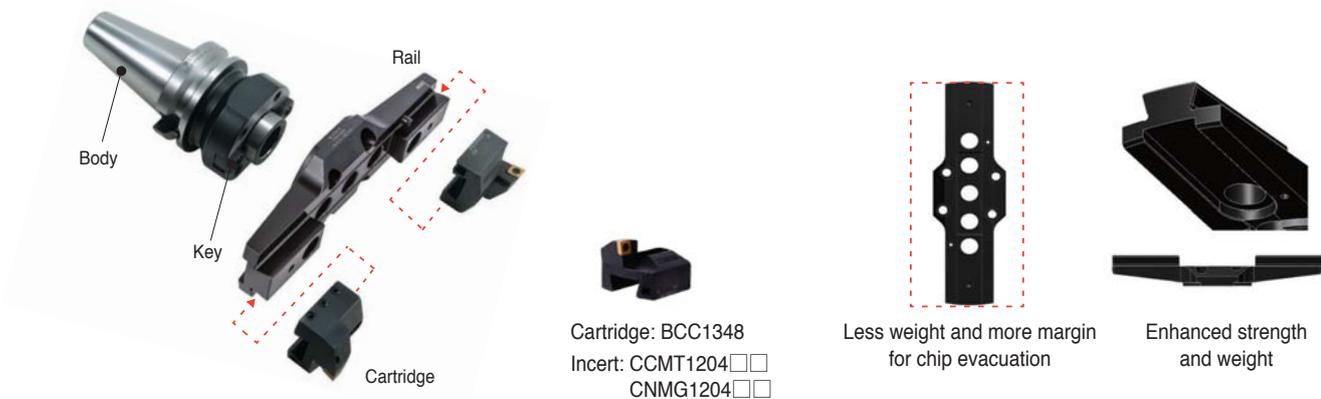

- Wide boring range for big diameters: Ø130~Ø540 mm
- Stable structure against for cutting load - Assembly by dove-tail structure
- Interconvert with FBC
  - Common boring head and rail adopted, different cartridge
- Light-weight (5%~20% reduced)
- Various cartridge approach angle: 15°, 45°

# Technical Information for FBC

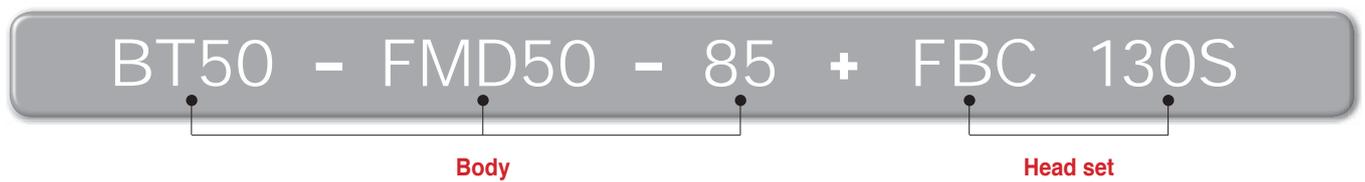

## Balance cut tool for Fine boring

# FBC

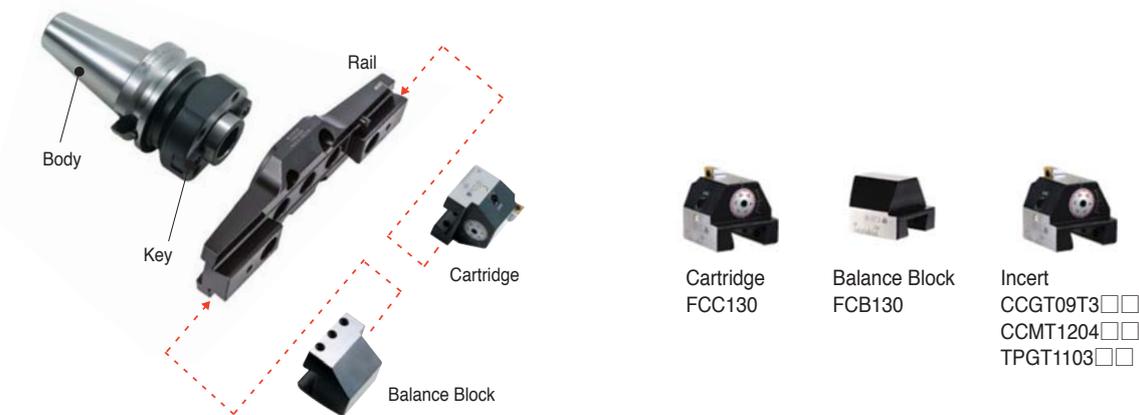

- Wide boring range for big diameters:  $\varnothing 130 \sim \varnothing 540$  mm
- Interconvert with TBC
  - Common boring head and rail adopted, different cartridge [micro cartridge+balancing block]
- Various Insert according to bite
  - Applicable insert: CCMT09T3/1204, TPMT1103 (Cermet, cBN, PCD)

Versatile tooling system that can flexibly react to FMS

# Modular System Series

- Versatile tooling system conforming to FMS specification
- Flexible combination of tool units according to conditions of subject
- Joining with a specially designed screw provides high accuracy (error less than  $5\mu\text{m}$ ) and ease of detach for one step setting
- Cutting edge of boring system aligned with the groove of drive key
- Corresponding accuracy and stiffness compared to uni-body type

## KORLOY Anti-Vibration tool

# KORLOY DAMPING PRO

- The application of a special design provides an excellent Anti-Vibration effect and is optimized for Overhang work
- Capable to elevate Feed comparing to standard arbor with stable machining
- Longer tool life and noise decrease
- Provides a solution for Mold, Deep Cavity machining, and Heavy-duty work

### Code system

KDP - BT50 - FMA25.4 - 260

**KORLOY DAMPING PRO**

**Arbor taper**

BT type  
HSK type  
SK type

**FMA:** JIS B4113 Face milling  
**FMB:** T-MAX Face milling/Shoulder Cutter  
**FMC:** T-MAX Face milling/Shoulder Cutter

**Length of gauge line**

### Features

- Anti-Vibration: Exclusively designed Anti-Vibration structure
- Material: Special alloy steel
- Anti-Vibration body: Application of high density damper
- Overhang: Capable for 2D~5D
- Coolant: Inner coolant is capable

BT type

HSK type

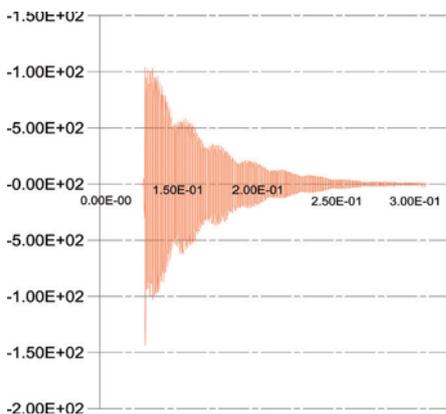

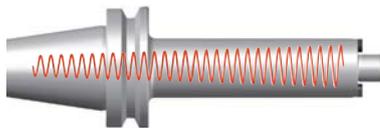

SK type

Various types and sizes are applicable

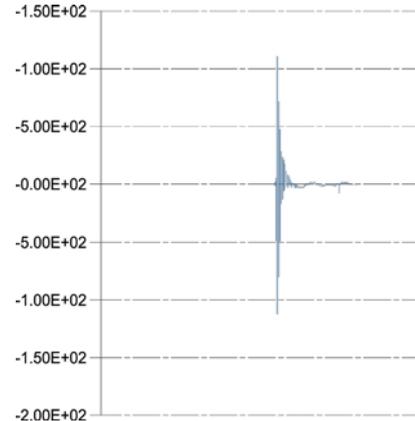

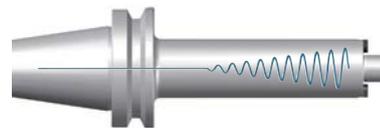

### Comparison of vibration damping time

Standard arbor

Longer Vibration damping time/  
Chattering is caused while Overhang work

KORLOY DAMPING PRO

Short Vibration damping time/  
Performance is 2~3 times better than standard arbor

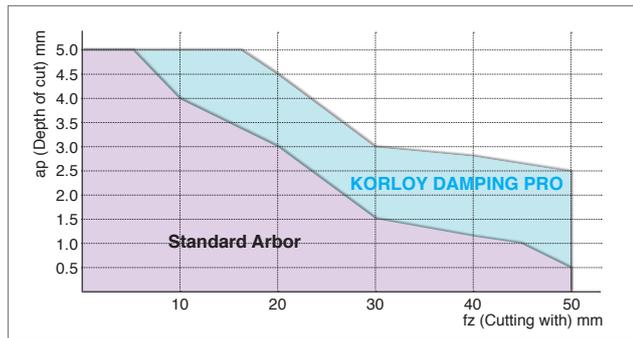

## Performance evaluation

- **Cutting condition:** fz (mm/t) = 0.1  
vc (m/min) = 100
- **Cutter:** AMC4063HS 6flute
- **Arbor:** BT50-FMC22-210 General arbor  
KDP-BT50-FMC22-210 Damping pro

- **Cutting condition:** fz (mm/t) = 0.1  
vc (m/min) = 100
- **Cutter:** FMRC3063HRD-H 6flute
- **Arbor:** BT50-FMC22-210 General arbor  
KDP-BT50-FMC22-210 Damping pro

## Application examples

Mold machining	Side milling cutter machining	Facing for long depth	Deep-hole Boring machining
			
Better productivity than general arbor	Excellent performance in the deep grooving	Better productivity and surface roughness than general arbor	Better surface roughness and machinability than general arbor

### Side milling cutter machining example

- Faulty occurrence on size and surface roughness by the vibration, when use the general arbor
- **Using DAMPING PRO, good size and surface roughness**

- **General arbor**  
**Cutting condition:**  
vc (m/min) = 50  
fz (mm/t) = 0.1  
ae (mm) = 20

- **DAMPING PRO**  
**Cutting condition:**  
vc (m/min) = 100  
fz (mm/t) = 0.1  
ae (mm) = 20

### Big size Crankshaft machining example

- General arbor: ap = 2 mm
- KORLOY DAMPING PRO: ap = 4mm available
- **2 times better productivity**

- **General arbor**  
**Cutting condition:**  
vc (m/min) = 100  
fz (mm/t) = 0.15  
ap (mm) = 2

- **DAMPING PRO**  
**Cutting condition:**  
vc (m/min) = 100  
fz (mm/t) = 0.15  
ap (mm) = 4

- The A type is for JIS B4113 Face milling
- The B type and C type are arbors for T-MAX Face Milling and shoulder cutter
- The weight (kg) shown in the chart does not include the weight of face cutter
  - Key and screw are clamped
  - Wrench is separately sold
